

Our environmental commitments

The Climate Action Accelerator, a low-carbon solutions lab, aims for a greenhouse gas emission footprint in line with the Paris Agreement objectives and for net zero emissions by 2040.

Organisation

- 1 - Each year we will measure the environmental footprint of the CAA initiative (in accordance with the GHG Protocol on all three scopes) and make the results public
- 2 - We will put in place an internal carbon tax on our purchases and allocate it to internal or external projects that contribute to global carbon neutrality by reducing emissions
- 3 - Our purchases of products and supplies meet environmental purchasing criteria and are recyclable

Transports

- 4 - For business travel we privilege carpooling, train and public transport if the difference with a flight is less than 3 hours door to door. We encourage our employees to use public transport or soft mobility for their commuting

Energy

- 5 - We choose a low carbon electricity supplier
- 6 - In our office practices, we save energy by make reasonable use of lighting, heating and air conditioning
- 7 - We streamline the storage and exchange of digital data (images, videos, shared documents)

Everyday life

- 8 - We sort out waste and recycle, we eliminate the use of single use plastics and reduce our packaging
- 9 - We pool electronic devices and increase their duration of use. When buying, we prefer eco- designed devices
- 10 - We will develop our website according to low-carbon principles
- 11 - We favour a sustainable diet during our internal events
